Objective

Unstructured data is best represented by resumes. Because there is no commonly agreed resume layout, it is difficult to categorize, thus we are attempting to address this issue by developing a tool for generating a resume analyzer utilizing NLP and techniques such as tokenization, lemmatization, and parts of speech tagging.

Techniques

- Natural Language Processing
- Model Building
- Data Cleaning
- Data Visualization

Deliverables

- Classified Resumes
- Visualized Data
- Sourcecode

The background features a series of concentric, wavy orange lines that create a sense of motion and depth, starting from the left and curving towards the right. In the bottom right corner, there is a partial view of a solid orange semi-circle.

Thank You
